

desk handbook phase diagrams for binary alloys - preface binary alloy phase diagrams have been studied for more than 100 years since ca. 1900. the wealth of knowledge accumulated experimentally and theoretically in this period was assessed and summarized in various compendia. **18 compounds of thorium with arsenic - link.springer** - 18.1.1 phase relations in the thorium-arsenic system the binary compounds th₃as₄ and th₂as₂ are well established in the thorium-arsenic system, based on x-ray diffraction measurements and thermal and electrical determinations. **unclassified ad-- a u '987** - ternary phase diagrams of columbium, molybdenum, tantalum, and tungsten. forty four new binary and 80 new ternary diagrams are included, some of these being revised. **the ni-ur (nickel-uranium) system - link.springer** - the assessed u-ni phase diagram (fig. 1) is based primarily on the work of [53gro], who conducted a study across the entire compositional range using the th-u (thorium-uranium) system - the phase behavior of the th-u system was studied by a variety of techniques, including x-ray, electrical resistivity, thermal, and metallographic measurements. **reactions of uranium and the platinide elements. ii. the ...** - appears in the compilation of the constitution diagram of uranium and thorium alloys by rough and bauer [1], and includes some of that from the present study. **14c in uranium and thorium minerals: a signature of ...** - equilibrium within the uranium or thorium minerals. 14c concentrations have been measured in several such minerals [8, 9] and compared with theoretical expectations. **thermodynamics of formation of th-co alloys - rd.springer** - the compilation of hultgren et al. ~ together with supplemental data sheets 2 current to june 1970 list a total of only eight binary systems for which some thermodynamic data have been compiled. since thorium is a fertile material with a significant probability of future importance in nuclear reactor technology, thermodynamic data on thorium alloy systems have relevance to the future. **materials science - office of science** - structural phase transformations and self-diffusion in transition metal hydride and deuteride phases, and to characterize lattice perfection and structural transformations in superconducting intermetallics. **predicting the behaviour of nuclear materials** - thermodynamics predicting the behaviour of nuclear materials by p. bull, j. d. navratil, f. l. oetting, and p. a. g. o'hare * the technical tasks which confront those responsible for the design and construction of nuclear reactors were utilized in the preparation and compilation of this survey. search completed december 1962. investigations on the binary systems of boron with chromium, columbium, nickel and thorium, ...
